COMMUNICATION MADE SIMPLE

Built on industry-leading technology, Vodafone Secure Device Manager is a comprehensive and cross-platform solution for your smartphone and tablet devices. Simple and easy to use – yet powerful and highly scalable

Secure Device Management

Ever increasing numbers of employees are taking full advantage of smartphones and tablets to access company email, data and information. The challenge is to keep the data on these devices secure. To help, Vodafone Secure Device Manager (VSDM), a powerful yet simple and scalable solution that helps you ensure the compliance of your mobile devices – and the security of your organisation's data. Using secure remote monitoring, you can update software from a central location, and even lock or wipe devices if they get lost, stolen or damaged.

Data & Content Management

VSDM is simple to deploy and enables you to configure and update device settings over-the-air. You can enforce security policies, compliance and grant secure access to your organisation's resources effectively across your mobile workforce. VSDM also allows you to send commands on-demand to devices to request info, perform remote diagnostics to identify device issues in real-time simply and efficiently.

Management Console

VSDM is accessible via a user-friendly device management console that you can access via any web browser, giving you complete visibility of all mobile devices deployed. The console allows you to streamline and automate the way you manage your mobile assets. It's also easy to update policies, settings, certificates or applications.

MANAGE THE SECURITY OF ALL YOUR MOBILES AND TABLETS FROM A SINGLE PORTAL.

Total Communications Partner

Total Mobile | Total Fixed

We're proud to be one of the first Total Communications Partners in the new Vodafone Partner Programme

VSDM is powered by Airwatch™, a leader in enterprise mobile device management technology. Deployments are quick and easy, simple to maintain and are available either as a cloud-based or on-premise solution.

Cloud-based solution

Vodafone's cloud-based service is available in both a shared hosted and dedicated hosted environment and is easily accessible over the Internet. As a customer of this service you pay a monthly subscription for each device under management, which includes maintenance and system upgrades. Benefits of this model include:

- Multiple redundant data centres underpinned by best-of-class hardware
- High availability and guaranteed SLA uptime
- Scalability supporting 100,000+ devices
- Speed of deployment requiring minimal effort
- No significant investment in technology or installation services
- Maintenance and upgrades are handled by us

On Premise solution

Vodafone Secure Device Manager is also available as a fully integrated mobile device management solution that's deployed on your premises. As an on-premise customer you purchase a perpetual software license per device.

- Hardware agnostic solution
- Designed to run on virtual environments
- Integrates with multiple enterprise services
- Scales to support 100,000+ devices
- No transmission and storage of data off site

Additional protection options are also available

Remote Control

- Enables your IT Helpdesk to remotely access and control field based devices
- Improves diagnostics and configuration
- Removes End User configuration discussions
- Available for Windows Mobile 5.x and 6.x

Secure Email Gateway

- Access control to Exchange ActiveSync, Office 365 (dedicated) or Gmail for Business
- Monitoring of activity between device and email platform
- Available for all leading platforms

Secure Content Locker

- Store documents in a secure cloud-based content management console
- Authenticate users, encrypted transmitted documents or disable access
- Distribute files and updates to a single device or a group of devices
- Available for Apple and Android tablets

Secure Email Gateway

- Browser protection that automatically blocks harmful sites
- Anti-theft measures that remotely locate, protect and control your phone
- Protection against viruses and malicious software (worms, trojans and spyware)
- Available for Android, Symbian, Windows Mobile 5.x and 6.x
